

How to Import XML Files

Fight Club 5

There are three different imports into Fight Club 5. Compendium files, including races, classes, backgrounds, feats, spells, items, and monsters, are imported from the Main Menu. Notes are imported from within a character. Characters are imported from the Create New screen.

You can also export characters in formats suitable for either Fight Club 5 or GM 5.

Compendium Files

To import compendium files, tap the compendium icon in the lower left of the main menu.

Tap the import icon in the upper right of the compendium window.

Tap "Select File from DropBox".
Navigate to your file in the DropBox
app and select it to return to Fight
Club.

If asked if you want to replace
duplicates, select "Replace".

You will receive confirmation that
your file was imported. Tap "OK".

Notes

To import notes to a character, open a character, scroll all the way right to the Notes section. Tap the Import icon. Thereafter, the process is identical to importing compendium items.

Importing and Exporting Characters

To export a character, tap the Sharing icon on that character's portrait while viewing the character.

You can select a format suitable for either Fight Club 5 or GM 5.

To import a previously exported character file, tap Create New on the main menu...

...and tap Select DropBox file.

GM 5

GM 5 has three different import locations: compendium items are imported via the compendium in the main menu, notes and characters are imported using the import function within a campaign, and a rules reference/DM screen is imported from within that function.

Compendium Items

GM 5 imports items, spells, and monsters. **You must import spells before importing monsters, otherwise the import will fail and the app will crash.** This is because monster's entries include links to the spells used by each monster.

Begin by tapping the compendium icon from the main menu.

Tap the import icon in the upper right of the compendium window.

Tap "Select File from DropBox". Navigate to your file in the DropBox app and select it to return to GM 5.

If asked whether to replace duplicates, tap "Replace".

You will receive confirmation that your file was imported. Tap "OK".

Notes and Characters

Notes and Characters are imported from within a campaign. Start by tapping the cog icon in the upper right of the campaign screen.

Next, tap "Import".

Tap "Select file from DropBox". Navigate to your file in the DropBox app and select it to return to GM 5.

If asked to replace duplicates, tap Replace. Your import will be confirmed; tap OK to continue.
